

ABSTRACT OF THE DISCLOSURE

A new schedule inputted as a ToDo list by a
schedule classifying unit is classified into any
schedule type of a term type in which it is necessary
5 to be conscious of designated date/time as a term of
the operation or a period type in which it is necessary
to assure a designated certain period for the operation
and the classified schedule is displayed. If the
inputted new schedule overlaps with an existing
10 schedule with respect to the time, a schedule adjusting
unit adjusts the schedules on the basis of the schedule
type of the term type or period type.
